🟡 Rethinking long-context VLM as multi-view constrastive learning

Câu lệnh test:

Import pdb

`pdb.set_trace()`

1/ Test case 1: Kiểm tra lại cách split text gồm split_base và split_base longer.

Ví dụ:

Split base: An outdoor daytime shot of a sculpted statue of George Washington in the foreground to the left and the University of Texas Clock Tower in the background to the right. A blue sky with two clouds floating above is seen behind the tower.

Split base longer: An outdoor daytime shot of a sculpted statue of George Washington in the foreground to the left and the University of Texas Clock Tower in the background to the right. The statue is on a square block platform made of the same metal. The stone foundation has wording etched to it professionally. The font reads," GEORGE / WASHINGTON / WHEN / MADE / COMMANDER / IN / CHIEF / OF / THE / AMERICAN / ARMY / OF / THE / REVOLUTION / ON / JULY / 3 / 1775."

2/ Task: Tạo biểu đồ 3 hàm loss → Test case: in ra hình hàm loss

3/ Task:

Python [train.py](#) --without_hinge_loss ...

Python [train.py](#) --weight_hinge_loss 0.5

4/ Tìm hiểu khả năng source (LL2CLIP + rethinking_logic) có chạy parallel nhiều gpu được k?
